WHAT'S UP WITH PEPTIDES?

Peptides have quickly moved from a niche area of functional and longevity medicine into one of the most closely watched areas of healthcare — and July brought a major update.

RECENT FDA REVIEW

On July 23-24, the FDA's Pharmacy Compounding Advisory Committee reviewed seven popular peptides and considered whether they should be added to the 503A Bulks List, which can allow state-licensed compounding pharmacies to use certain substances when preparing medications for patients with prescriptions.

RECOMMENDED TO MOVE FORWARD:

- BPC-157
- KPV
- TB-500
- MOTS-c
- Semax
- Epitalon

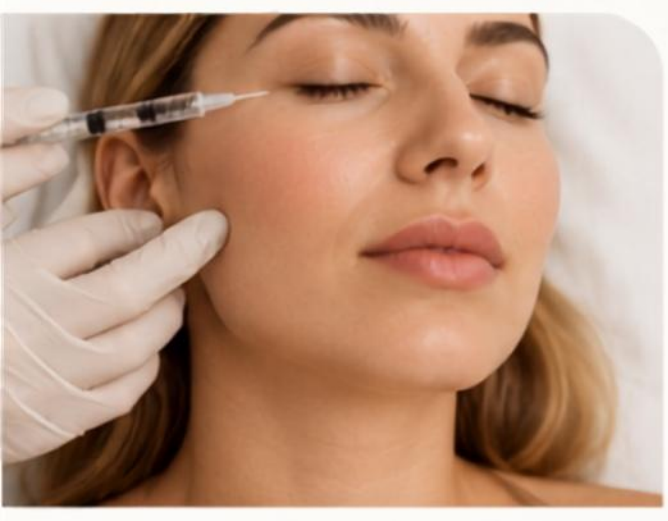

WHY IS THIS A BIG DEAL?

For years, patients have obtained peptides through a patchwork of compounding pharmacies, clinics, and sometimes unregulated online sources.

The FDA has raised concerns about limited human safety data, impurities, product characterization and potential immune reactions.

There is also another side to the conversation: access and economics.

The goal is safer, more transparent access and this area of medicine continues to evolve.

WHAT THIS MEANS FOR PATIENTS

The peptide field is not going away. The July recommendations could eventually make several popular peptides more accessible through regulated compounding pharmacies — but we are not at the finish line yet.

- What is the evidence?
- Where is it coming from?
- How is it tested?
- Is it compounded legally?

PEPTIDES AT ARTISTRY

What this means for you

INNOVATION WITH GUIDANCE

At Artistry Skin & Hormone, we believe patients deserve access to innovative therapies while also understanding the evidence, limitations and regulatory landscape surrounding them.

WHAT THIS COULD MEAN

The six peptides highlighted in this issue may begin, or in some cases resume, being compounded by licensed pharmaceuticals as regulations and availability evolve.

HOW ARTISTRY HELPS

- Personalized consultation
- Evidence-based guidance
- Access through licensed pharmacies when appropriate
- Ongoing support and education

A NOTE ON 'RESEARCH ONLY' PEPTIDES

Many other peptides sold online are labeled "For Research Only" or "Not for Human Consumption." These products are not the same as medications prescribed through a clinician and dispensed by a licensed pharmacy. Their purity, fertility, dosing and quality may not be verified for human use.

THE ARTISTRY APPROACH

Our role is to help patients separate the hype from the science and understand what is supported by evidence, what is legally available, and what may be appropriate under medical supervision.

Artistry does not recommend self-injecting products labeled for research use.

Curious about peptides? *Start with a conversation.*

Educational information only. Treatment options and availability are subject to clinical evaluation, current regulations and pharmacy access.

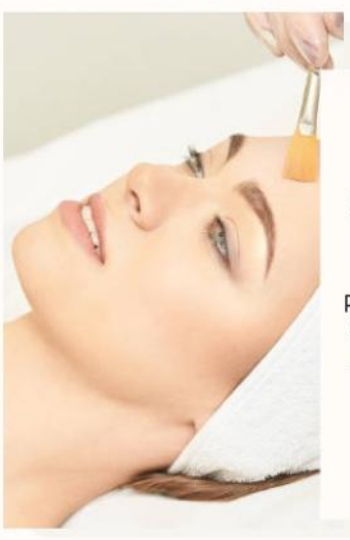

SEPTEMBER *Specials*

REFRESH + REPAIR

Summer can leave skin feeling dehydrated, dull, and showing more visible sun damage. September is the perfect time to focus on brightening, renewing, and restoring your skin for a clearer, healthier-looking glow.

THIS MONTH'S SPECIALS

FREE SKINBETTER GLO PEEL

Receive a FREE SkinBetter Glo Peel, valued at $99, with the purchase of any skincare package.

Packages start at $116!

FREE SKINMEDICA EVEN & CORRECT

Receive a FREE full-sized SkinMedica Even & Correct, valued at $165, with the purchase of an IPL package of 3.

SOMETHING NEW IS COMING...

DAXXIFY

AT ARTISTRY

Artistry Skin and Hormone will soon be carrying Daxxify.

MENTION THIS NEWSLETTER AND RECEIVE 10 FREE UNITS WHEN TREATING WITH 30 UNITS OR MORE!

Don't miss out!

These offers are available while supplies last, so this is the perfect time to refresh your skin and take advantage of September savings.
